

Running the Program

1. Import the eclipse project from archive file **MerchantGuideToGalaxy.zip** by following steps as mentioned at http://agile.csc.ncsu.edu/SEMaterials/tutorials/import_export/index.html#section1_0
2. Go to **ServiceTest.java** in test src folder and run it as junit test. It will read the problem data from **input/problemData.txt** and generate output at **output/problemOut.txt**
There is also another test **RomanConverterTest.java** which tests the functionality of conversion of roman number to decimal (used internally) using the ground truth data from **RomanNumbersList.csv**

High Level Overview

Below diagram illustrates a High Level Overview of the design
